

Pica P520

Anti-graffiti coating for winter use

Generally:

Pica Protector 520 is a wax based water borne graffiti protection system that protects the surface effectively against spray, paintbrush and Indian ink graffiti. Pica Protector is specifically designed to function during winter. Pica Protector 520 is a sacrificial protection system, which means that the surface must be re-protected since the protective coating disappears, wholly or partially, during high pressure cleaning.

Use:

Pica Protector 520 can be used on most types of surfaces. Recommended surface temperature: -2 - +5 ° centigrade.

Directions for use:

Application

- Clean surface thoroughly.
- Spray surface evenly with Pica Protector 520. Work from the bottom of the facade to the top of the facade.
- Spray surface with an additional coating when the first coating has become transparent. The surface is now effectively protected.

NB. Always apply two coatings to get fully adequate protection.

Cleaning

- Remove the graffiti with a high pressure cleaner at 70 bar at a temperature of 70 ° Celsius.
- Re-protect with two coatings of Pica Protector 520.

Solution to be used:

Concentrate (pH 8,5).

Estimated amount to be used:

Varies according to the surface. In general estimate the following;

Painted surfaces, natural stone	0,20L/m ²
Concrete, Brick	0,30L/m ²
Render	0,40L/m ²

Personal protective measures:

Not needed.

Labelling:

Not classified as hazardous goods.

Storage/durability:

Store dark and frost free. Durability, about 24 months in sealed original container.

Technical data:

Contains:	Montan waxes
Appearance:	Milky white liquid
Odour:	Neutral
